starts with inaugural speech of honorable principal sir, Dr. Nirmalendu Sarkar. Then Madhumita Sen, Assistant Professor and HoD of the concerned dept have introduced the speaker Prof. Malay Mukhupadhyay to deliver his lecture. Due to technical fault second resource person could not deliver his lecture. Many questions were asked by the participants in the interaction session, but due to time shortage only few of them were answered by the resource person. At the end of the session our IQAC coordinator Utpal Das gave his valuable valedictory speech. E-certificate was issued to those who filled-up feedback form. Participants were satisfied with the topics & deliberation. Most of them demand more webinar like this with extended time. In this pandemic situation online mode is very useful to invite speakers from different parts of the world as well as participants also within short period of time. That's why we organize this webinar so that we and also our students can be enriched with diversified knowledge. As this webinar was successful according to the participants so we, the faculties will try to organize more seminars in future.

Report:

Chatterjee started his presentation with the definition and explanation of plasma. Matter changes its state when energy is supplied to it, solid become liquid and liquids become gaseous. If even more energy is supplied to a gas, it is ionized and goes into the energy rich plasma state, the fourth state of matter. He also discussed about medical application of plasma technology. The ability to produce cold plasma at atmospheric pressure conditions was the basis for rapid growth of plasma related application areas in biomedicine. For medical applications two different types of cold plasma appear suitable: indirect (plasma jet) and direct (dielectric barrier discharge-DBD) plasma sources.

A discussion on “Unmasking the Sexual Subalterns through film Adaptations” was organized by the Literary Society of the Department.

The speaker referred to films like *Cobalt Blue* which is an Indian Hindi-language [dramafilm](#) written and directed by [Sachin Kundalkar](#) starring [Prateik Babbar](#), [Dr. Neelay Mehendale](#), and [Anjali Sivaraman](#). It is adapted from the [novel of the same name](#) that follows the story of a brother and sister who fall in love with the same man and the ensuing events that shatter their traditional conservative family. Set in the 1990s, the movie examines the themes of loneliness, same-sex love, and the free spirit of transcending societal barriers.

The other film referred to was *Fire* which is a 1996 Indo-Canadian [erotic romantic dramafilm](#) written and directed by [Deepa Mehta](#), starring [Shabana Azmi](#) and [Nandita Das](#). It is the first instalment of Mehta's [Element Trilogy](#); it is succeeded by [Earth](#) (1998) and [Water](#) (2005). The film is loosely based on [Ismat Chughtai's](#) 1942 story, "[Lihaaf](#)" ("The Quilt"). *Fire* is one of the first mainstream [Bollywood](#) films to explicitly show homosexual relations, and the first to feature a [lesbian](#) relationship. The relationship also juts into the institution of family as the relationship in question is between two sister-in laws of the same household.

An enlightening lecture on the icon of all times, Satyajit Ray's not so familiar side – his identity as a book cover designer. The speaker who is himself a cover designer paid a befitting tribute to the phenomenal artist in Ray as he delved into the book cover designs some written by Ray himself and some by others. From the 1st cover of “Pagla Dashu” to the very pictorial “Khai Khai” to “Kumaoner Manush-kheko Baag” (The Man eater of Kumaon) where the paws of the tiger seem to jut through the cover. It was an enthralling journey to visualize the artwork and the brilliant strategy that went behind designing such book covers. That Ray who is overwhelmingly known for his film works took us beyond his moving lens to his multi-talented dimension of a cover artist too.

Report:

In recent years, colloidal cesium lead halide (CsPbX₃) perovskite nanocrystals (PNCs) have attracted significant attention from researchers due to their unique optical properties and potential use in optoelectronic applications. In colloidal synthesis, oleic acid and oleylamine are commonly used as surface-capping ligands. Although oleylamine plays a crucial role in maintaining the colloidal stability and surface passivation of PNCs, its dynamic equilibrium with oleic acid leads to the formation of labile oleylammonium, which pulls halides from the surface of PNCs and thus degrades the crystals. In this Perspective, we summarize the various approaches for eliminating the amines to make high-quality, photostable, and amine-free CsPbX₃ PNCs. In addition, we look over the prospects of these PNCs regarding stability in different environmental conditions, photoluminescence properties, and optoelectronic device performance. This perspective will give a broad overview of amine-free PNCs starting from their synthesis, challenges, and optoelectronic properties to their future prospects
